

Drinking Water in Schools

William A. Freeman

- President at Safety/Environmental consulting firm of Environmental Management Consulting, Inc. (EMC).
- BS & MS in Occupational Safety from the University of Wisconsin-Whitewater.
- Certified Hazardous Materials Manger (CHMM)
- Certified Indoor Air Quality Professional (CIAQP)
- Served on the Board of Directors for the Wisconsin School Safety Coordinators Association (WSSCA) in the capacity of president and currently acts as an advisor to the board.
- Served as a Board of Directors for the Wisconsin Association of School Business Officials (WASBO).

Abbie L. Maule

- Field staff at Safety/Environmental consulting firm of Environmental Management Consulting, Inc. (EMC) since 2018.
- BS in Environmental Science from Carroll University.
- Wisconsin DNR Certified Small Water System Operator (OTM/NN)
- Certified Asbestos Inspector and Supervisor
- Lead Beekeeper at Abees Honey Supply.

SDWA Background

Safe Drinking Water Act (SDWA)

- Created in 1974 & emended and reauthorized in 1986 & 1996.
- Ensures safety of Americans' drinking water.
- Authorized EPA to set national standards to protect health effects from contaminants.
- Only applies to public water systems (NOT private wells).
- Wis. DNR enforces these rules in WI.

SDWA In Wisconsin

Department of Natural Resource (DNR)

- Responsible for implementing SDWA in Wisconsin
- SDWA is managed by the Bureau of Drinking Water and Groundwater.
 - **Approvals**
 - Well construction, pump installation & rehabilitation, chemical addition to water, water treatment and new system capacity.
 - **Technical Assistance**
 - Assist public well operators with SDWA compliance.
 - **Inspections**
 - Public wells & assesses vulnerability of water systems to contamination.
 - **Enforcement**
 - Enforces SDWA regulations – Notices of violation & legal action

WI - SDWA Background

Types of Public Water Systems:

Community

- Municipal Water System (MC)
 - ≥25 of year-round residents or ≥15 service connections.
 - Example: Cities, Towns, Villages
- Other-Than-Municipal Water System (OTM)
 - ≥25 of year-round residents or ≥15 service connections.
 - Owned by entity that is NOT municipality
 - Example: Mobile Home Parks, Apartments, Condominiums

Noncommunity

- Non-Transient Non-Community Water Systems (NTNC)
 - ≥25 of the same people for at least 6 months of the year.
 - Example: Schools, Daycare, Factories, Office Buildings
- Transient Non-Community Water System (TN)
 - ≥25 people, not the same people, for at least 60 days of the year.
 - Example: Motels, Gas Stations, Campgrounds, Restaurants

SDWA In WI Schools & Childcare Facilities

Non-Transient Non-Community Water Systems

- Required to have Certified Operator
 - May be an employee or a hired contractor.
 - Certificate issued by Wis. DNR.
 - High School Diploma or GE
 - Score of at least 75% on certification exam
 - Continuing education training & cert. renewal every 3 years.
 - Notify the DNR of change of Certified Operator.

Approx. 98,000 public schools & 500,000 childcare facilities not regulated under the SDWA in the US.

- Drinking water testing is completed by the municipality or water system.
- May or may not conduct voluntary drinking water testing.

Sampling Requirements for NTNC Wisconsin Schools

- ❖ The DNR will determine the sampling schedule for the calendar year.
- ❖ 9 year cycle for all contaminants
- ❖ DNR's vulnerability assessment may determine the contaminants to be monitored:
 - System type
 - Population served
 - Type of Source water
 - Location:
 - Example: Near a gas-station – VOCs
 - Example: Near a farm or golf course – Nitrates

Sampling Requirements for NTNC Wisconsin Schools

Public Notification

LEAD AND COPPER ACTION LEVEL EXCEEDANCE NEXT STEPS PART 1- INVESTIGATIVE SAMPLING, PUBLIC EDUCATION & CORROSION CONTROL TREATMENT (CCT) RECOMMENDATION WORKSHEET

	REQUIREMENTS	DUE BY
 <p>WATER QUALITY PARAMETER (WQP) SAMPLING</p>	<p>Collect a set of WQP samples and submit them to a drinking water certified lab. Collect WQP samples from both of the following:</p> <ul style="list-style-type: none"> one (1) site within your distribution system; and each entry point. <p>Collect a second set of WQP samples 4-14 days after collecting your first set - from each entry point and from one site within your distribution system - and submit them to the lab.</p>	Both sets of samples must be completed by June 30, 2023 .
 <p>LEAD & COPPER SOURCE WATER SAMPLING</p>	Collect a single sample from each entry point and have it analyzed for lead and copper at a drinking water certified lab.	Samples must be completed by June 30, 2023 .
 <p>PUBLIC EDUCATION¹</p>	<p>Deliver Public Education (PE) materials to water consumers according to the instructions in the enclosed <i>Lead/Copper Public Education Program</i> sheets.</p> <p>Submit a report documenting the completion of the Public Education requirements. A <i>Verification of Public Education</i> form is included with the <i>Lead/Copper Public Education Program</i> sheets.</p>	<p>PE must be delivered no later than August 31, 2023.</p> <p>PWS must submit a report documenting completion of PE requirements within 10 days of PE delivery.</p>

When Maximum Contaminate Level (MCL) exceeded:

- Notify the public of the condition.
 - Contaminant found & its level
 - Health effects of exposure
 - Measures being taken to alleviate the problem
 - Name & telephone number of person who can provide more info.
- Notice must be posed at all drinking water outlets
- Type of notification will depend on:
 - Severity of the contamination
 - Type of population being served
 - Urgency of the situation

DWS Portal

A Public Water System (PWS) provides piped water to the public for human consumption. Wisconsin PWSs are regulated under the Safe Drinking Water Act (SDWA). This site allows you to query and download data from our database, the Drinking Water System (DWS), which is maintained and used by DNR SDWA regulators. Information is current as of approximately 10 p.m. the prior day. It includes information such as PWS monitoring and other requirements, sample results, violations, inspection findings, plan/document review status, etc. For assistance using this tool, please refer to the "Help" link in the upper right corner. If your question is not answered there or you receive an error, please email DNRPublicWaterApplicationSupport@wisconsin.gov for further assistance, or call Chris Hartwig (608) 264-6131 or Kathy Mooney (608) 264-6026.

Lead in Drinking Water

- ❖ Lead can enter drinking water when plumbing materials contain lead.
- ❖ Common sources of lead in drinking water
 - Lead pipes
 - Faucets & fixtures
 - Lead service lines
 - *Most common problem is with brass or chrome-plated brass faucets with lead solder.*

Lead in Drinking Water

Corrosion - Dissolving of metal caused by chemical reaction between water and plumbing.

Factors for the lead “leaching” into drinking water:

- Acidity/Alkalinity
- Types & amounts of minerals in the water
- Amount of lead the water contacts
- Temperature of the water
- Wear in the pipes
- Presence of protective scales or coating inside plumbing

Proactive Lead and Copper Sampling

- ❖ Recommended for schools on municipal systems
- ❖ Sampling based on SDWA procedures

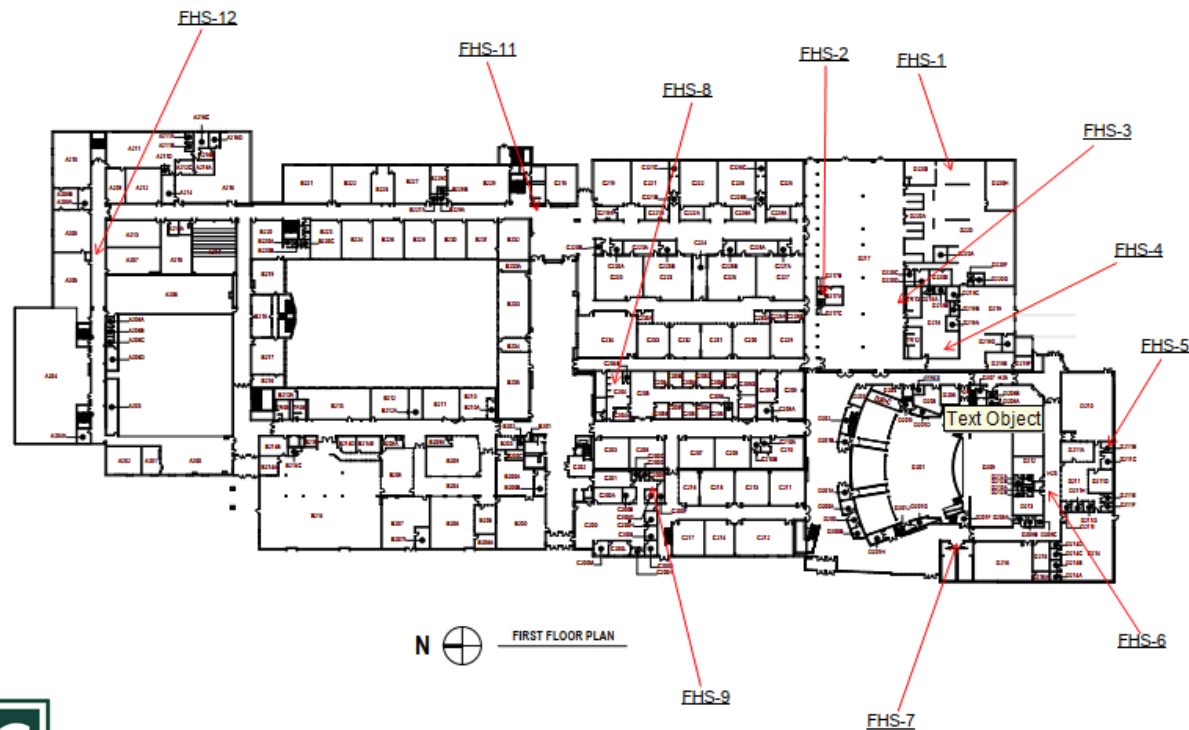

Proactive Water Sampling

April 2023

School District: _____

School: High School

ug/L: Micrograms per Liter
ND: Not Detected
MCL: Max Contaminant Level for Drinking Water Samples
WDNR Lead MCL: <15 ug/L

Site #	Sample #	Sample Location	Floor	Sink/Drinking Fountain	DN	Lead Results	Copper Results
1	FHS-1	D220 Kitchen – against back wall next to fridge (inc. Source)	1	Stainless Steel Goose-neck Sink	X		
2	FHS-2	D217A – a-la-cart cafeteria concessions window sink	1	Stainless Steel Goose-neck Sink	X		
3	FHS-3	Cafeteria Bottle Fill Station – Left Side (east)	1	Bottle Fill Station	X		
4	FHS-4	Staff Lounge @ Cafeteria Sink	1	Stainless Steel Goose-neck Sink	X

9	FHS-9	Main Office Kitchenette – at bathrooms in C200	1	Stainless Steel Goose-neck Sink	X		
10	FHS-10	Drinking Fountain at C301 – at top of stairs and elevator	2	Bottle Fill Drinking Fountain	X		

Lead Drinking Water – Sample Procedures

Sampling DO'S

Schools should develop a program to routinely flush plumbing fixtures after extended school closings.

Ensure water has been idle for at least 6 hrs, but not more than 18 hrs.

Sample water from cold water faucet.

Collect “First Draw” sample

Sampling DON'Ts

Do NOT pre-flush the tap prior to the 6-hr stagnation period.

Do not remove aerator.

Do NOT collect samples on Mondays or after extended breaks where water has remained motionless significantly longer than 6 hrs.

Do NOT use a tap that is downstream of a filter/softener unless all water is filtered/softened.

Per- and Polyfluoroalkyl Substances

- ❖ Large group of manmade chemicals that have been created and used in countless manufactured products since the 1940s
- ❖ By 2023, thousands of PFA variations have been created and widely distributed because of their unique and useful properties
 - ❖ Water resistant
 - ❖ Grease resistant
 - ❖ Long lasting

What are PFAS?

PFAS are a group of human-made chemicals used for decades in numerous products.

stain-resistant carpet & fabric

non-stick cookware

firefighting foam

fast food packaging

Products that **may contain PFAS.**

The Problem With PFAS

Make their way into our soil and waterways and do not break down naturally in the environment

- Fire Training/Fire Response Sites
- Industrial and Manufacturing Sites
- Landfills
- Wastewater Treatment Plants

This means humans and animals are continuing to consume these chemicals.

- Dangerous to human health

The PROBLEMS with PFAS

HOW DOES IT GET INTO OUR BODIES?

- Cooking with nonstick pans
- Products containing PFAS
- PFAS-contaminated food and water
- PFAS in air and dust

HEALTH PROBLEMS LINKED TO PFAS

- Kidney and testicular cancer
- High blood pressure and pre-eclampsia
- Higher cholesterol
- Lower infant birth weights
- Decreased vaccine response in children

PFAS

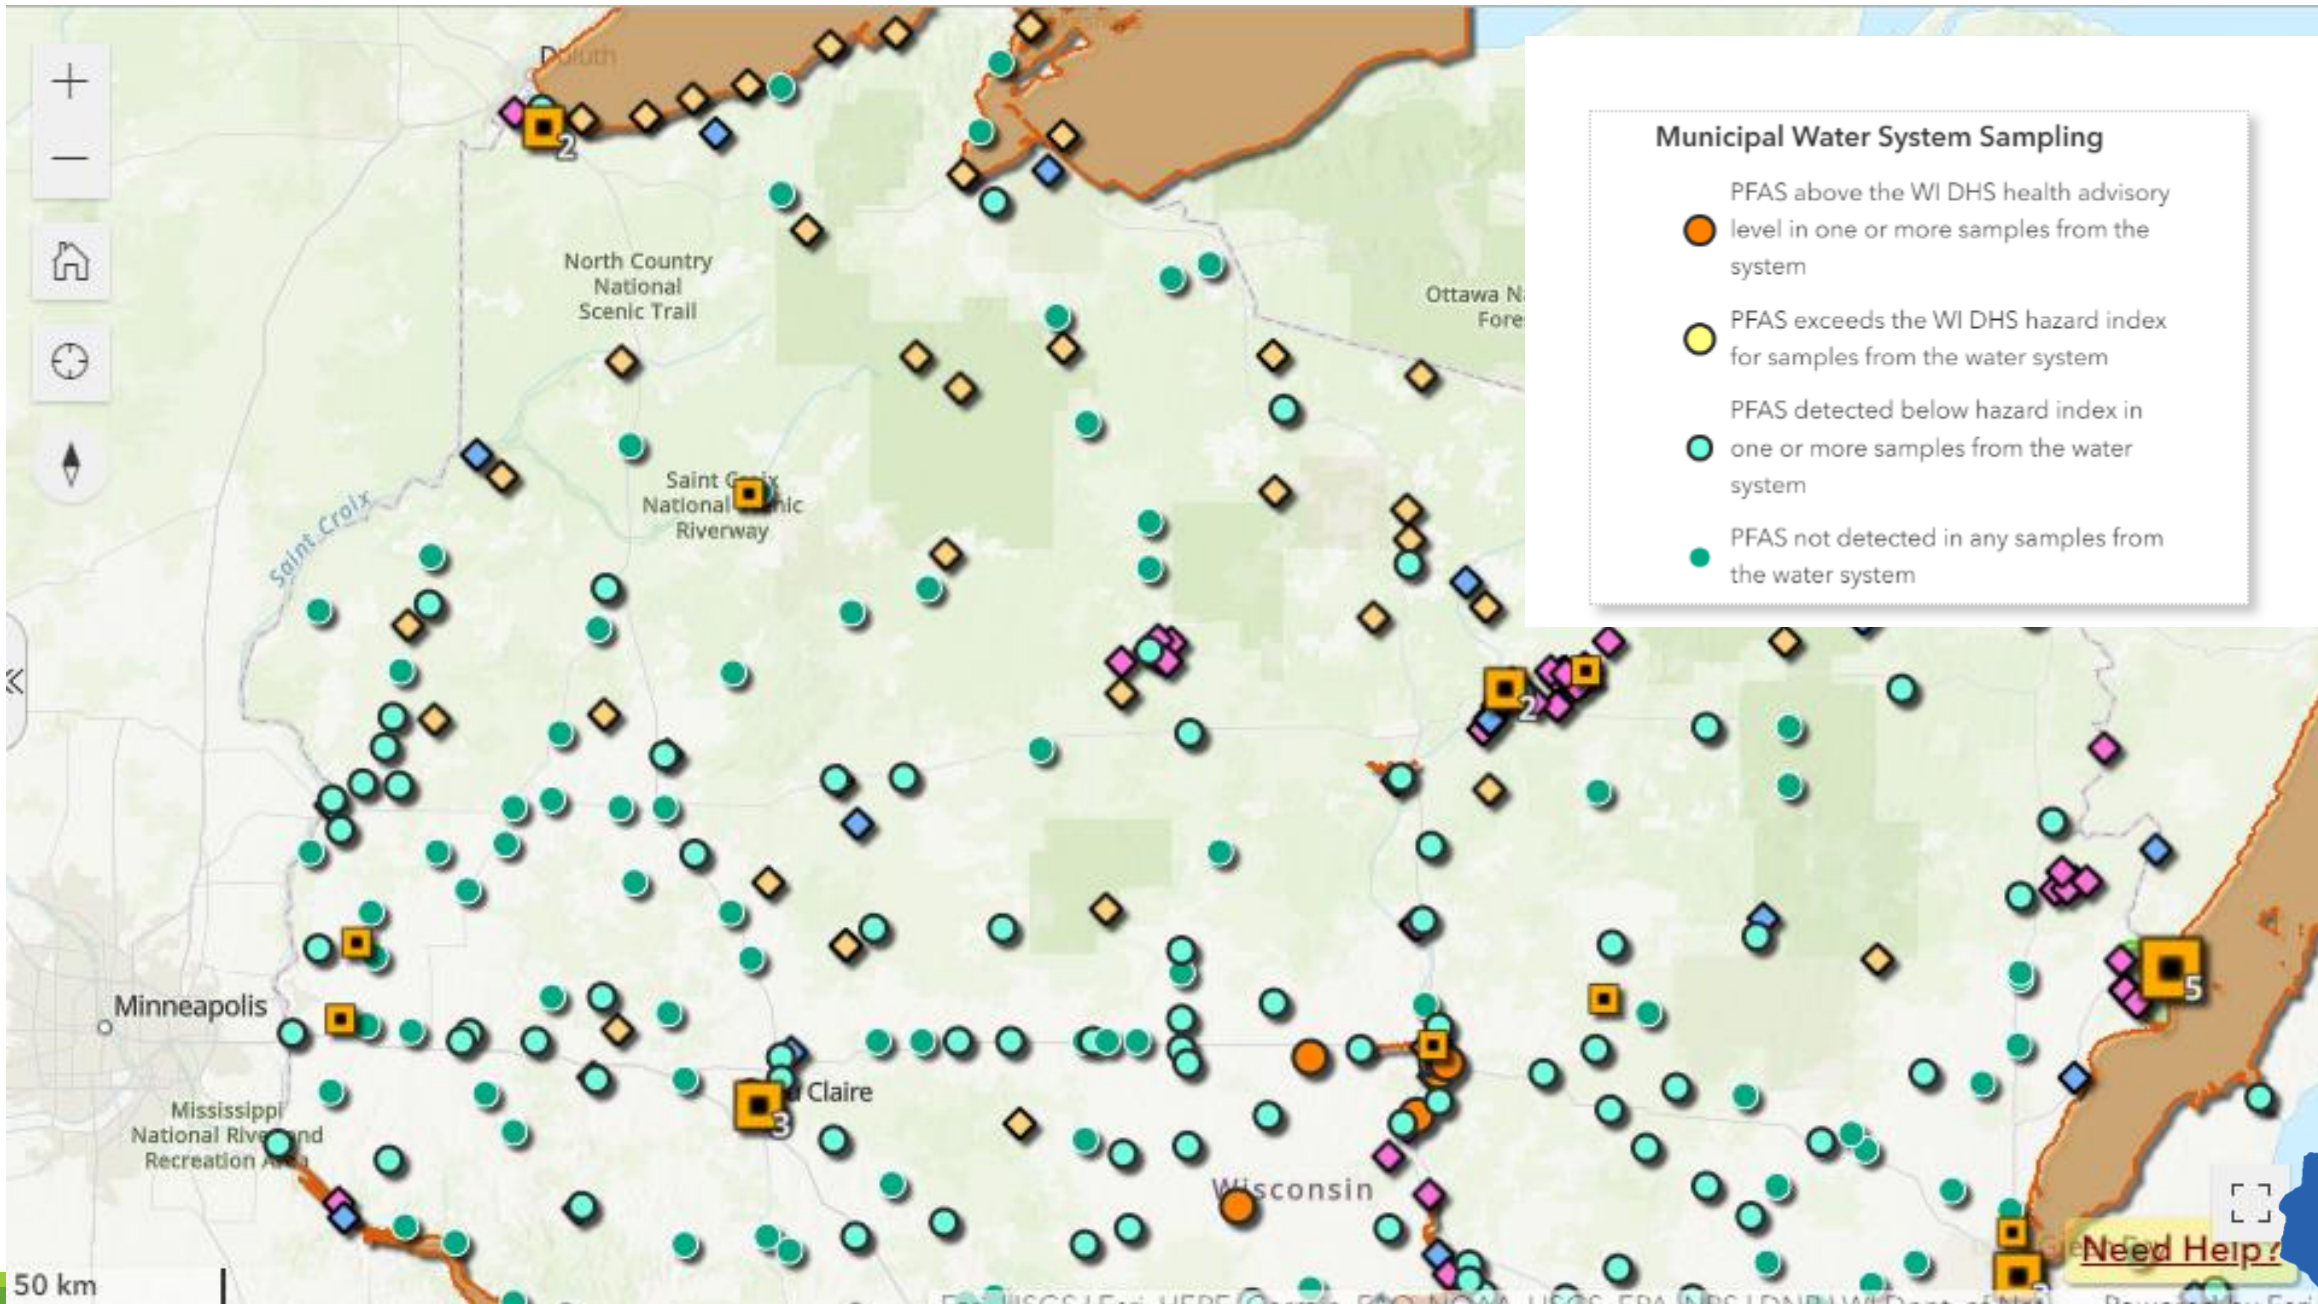

- Short for **per- and polyfluoroalkyl substances**, chemicals used in products such as non-stick cookware, food packaging, water-resistant clothing, and stain-resistant carpeting
- Also called **'forever chemicals,'** they can take up to 1,000 years to break down in nature

WHAT CAN WE DO?

- INDIVIDUALS** – **avoid products with PFAS** and ask policymakers to limit or ban its use
- HEALTH PROFESSIONALS** – **advise patients on how to avoid PFAS** and support limits on its use
- BUSINESSES** – **phase out use of PFAS** and avoid non-essential uses
- POLICYMAKERS** – **limit or ban PFAS**

Municipal Water System Sampling

-  PFAS above the WI DHS health advisory level in one or more samples from the system
-  PFAS exceeds the WI DHS hazard index for samples from the water system
-  PFAS detected below hazard index in one or more samples from the water system
-  PFAS not detected in any samples from the water system

50 km

Need Help?

Municipal Water System Sampling

- PFAS above the WI DHS health advisory level in one or more samples from the system
- PFAS exceeds the WI DHS hazard index for samples from the water system
- PFAS detected below hazard index in one or more samples from the water system
- PFAS not detected in any samples from the water system

What if my municipal system has an exceedance?

- ❖ You should be notified!
- ❖ Who is responsible?
- ❖ Look up Consumer Confidence Report (CCR)

The screenshot shows the City of Brookfield Wisconsin website. The header includes the city logo and navigation links for Government, Departments, Business & Development, Residents, and Our Community. A dark blue sidebar on the left contains links for Billing Information, Cold Weather Tips, Cross Connection Control, Customer Responsibilities, Fire Hydrants, General Information, and Hydrant Flushing. The main content area features a breadcrumb trail: Home > Departments > Public Works > Water > Water Quality Report. The page title is "WATER QUALITY REPORT" and the section is "Report Information". The text explains that the report is required by the U.S. Environmental Protection Agency and the Wisconsin Department of Natural Resources, and provides contact information for questions.

WATER QUALITY REPORT

Report Information

Under the direction of the U.S. Environmental Protection Agency, the Wisconsin Department of Natural Resources requires all communities to publish an annual Water Quality Report (also known as a Consumer Confidence Report). This report contains information on the quality of the water delivered and characterizes any risks from exposure to contaminants that may be found in the drinking water. Please feel free to contact our office at 262-796-6717 with any questions you may have regarding the report.
